1 Introduction

Welcome to this **VimTeX** test document. This file covers the most common LaTeX features so you can verify your setup works end-to-end: compilation, PDF preview, and live reloading.

This document was compiled with `latexmk` and viewed in `Zathura` (or your configured viewer).

2 Math

2.1 Inline Math

Einstein's famous equation is $E = mc^2$, and the quadratic formula is $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$.

2.2 Display Math

The Gaussian integral:

$$\int_{-\infty}^{\infty} e^{-x^2}\, dx = \sqrt{\pi}$$

Maxwell's equations in differential form:

$$\nabla \cdot \mathbf{E} = \frac{\rho}{\varepsilon_0} \tag{1}$$

$$\nabla \cdot \mathbf{B} = 0 \tag{2}$$

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t} \tag{3}$$

$$\nabla \times \mathbf{B} = \mu_0 \mathbf{J} + \mu_0 \varepsilon_0 \frac{\partial \mathbf{E}}{\partial t} \tag{4}$$

2.3 Theorem Environment

Theorem (Pythagorean): For a right triangle with legs a, b and hypotenuse c:

$$a^2 + b^2 = c^2$$

3 Text Formatting

- **Bold text** for emphasis
- *Italic text* for titles or terms
- <u>Underlined text</u>
- `Monospace` for code or filenames
- Colored text using `xcolor`

1. First ordered item
2. Second ordered item
3. Third ordered item

4 Tables

Table 1: A sample comparison table

Tool	**Language**	**Speed**	**Stars**
Neovim	C / Lua	Fast	80k+
VimTeX	Vim Script	Fast	5k+
latexmk	Perl	Medium	—
Zathura	C	Very Fast	3k+

5 Code Listing

Listing 1: A simple Python example

```python
def fibonacci(n: int) -> list[int]:
    """Return the first n Fibonacci numbers."""
    seq = [0, 1]
    for i in range(2, n):
        seq.append(seq[-1] + seq[-2])
    return seq[:n]

print(fibonacci(10))
# [0, 1, 1, 2, 3, 5, 8, 13, 21, 34]
```

6 References & Links

You can label sections and refer back to them. For example, see Section 2 for the math examples.
